FormaOS
COMPLIANCE OPERATING SYSTEM

SEED · AU
ejazhussaini313@gmail.com
app.formaos.com.au

The compliance OS for regulated operators.

Care providers, health, and childcare operators run compliance in spreadsheets and shared drives. Audits take weeks. Accountability is diffused. FormaOS replaces the sprawl with one AU-hosted operating system — evidence, controls, tasks, and care operations linked by design.

PROBLEM

Compliance is a filing cabinet, not a system.

- Evidence scattered across SharePoint, Dropbox, and email
- Audits take 6–10 weeks; owners re-gather the same artefacts each cycle
- Care delivery and compliance live in disconnected tools
- Boards and regulators want a live posture, not a quarterly deck

WEDGE

Care Operations — what Drata & Vanta don't have.

- Staff credential lifecycle, shift-aligned attestations, incident chains
- Participant / patient / resident records linked to the control library
- AU-resident data, Essential Eight aware, SoCI- and Aged-Care-ready
- Regulator-grade trust surface without a US-centric SOC-2 rebuild

Compliance Engine
